Structured Packings
for Distillation, Absorption and Reactive Distillation
Structured packings for separation and reactive distillation

This brochure was reviewed and supplemented recently. It therefore provides a complete, up-to-date overview of packings available from Sulzer Chemtech. Also included is a summary covering the essential column internals and our technical services.

For further information and to download our brochures as well as design tools, please refer to www.sulzerchemtech.com

More detailed product information, you will find in the following brochures:

- Internals for Packed Columns
  The brochure contains a comprehensive summary of the selection of internals supplied by Sulzer Chemtech, and a description of the most important features of the distributor technology.

- Gas Processing
- Chemical Processing Industry
- Process Technology and Equipment for Oil Refineries and Crude Oil Production
  Three brochures which illustrate the wide spectrum of application of structured packings.

Sulcol Design Program
A program that enables users to carry out hydraulic design of columns featuring every type of packing Sulzer Chemtech offers. The program is based on our experience with several thousand industrial columns and from experimental data measured in our own test column with a diameter of 1 m.

Considering the broad selection of products and widely proven application know-how, Sulzer Chemtech is in a position to offer the suitable solution even for the most difficult separation tasks.

Column design

- Formula notation 27
Sulzer Chemtech has been active as equipment supplier to the chemical industry since the nineteen forties. In the early days the engineering design was completely dependent on the specification provided by customers. At the end of the fifties Sulzer was ready to offer its own solutions to specific chemical process engineering problems. These early activities laid the corner stone for sustained innovation by establishing an in-house development group and a well equipped pilot facility.

**Gauze packings**
The invention of the gauze packings BX and CY in the early sixties resulted in a decisive breakthrough in distillation technology. The special advantages of these packings allowed difficult separation tasks to be accomplished for the very first time, and thermally sensitive substances to be separated by means of distillation.

**Mellapak**
A further milestone was the development of the structured packings Mellapak in the seventies. Originally conceived to cover the moderate vacuum range up to atmospheric pressure, Mellapak opened up new and unforeseen perspectives in all areas of thermal mass transfer.

**Applications**
The eighties were marked by the widening of the application range of Mellapak in the petrochemical, oil and gas industries as well as in exhaust air cleaning and in the stripping of volatile constituents from wastewater. Typical examples are vacuum towers in refineries and high-pressure absorption columns for natural gas drying. In comparison to conventional technology, Mellapak offers substantial benefits in many process applications. During the past 40 years, thousands of columns, originally equipped with trays or random packings, have been revamped with Mellapak in order to improve yield or purity or to increase capacity. Due to extensive test data gathered in our process engineering laboratory as well as experience gained in numerous industrial applications, we are able to offer the best possible solution for your application requirements.

**Column Internals**
With the concept of advanced internals, Sulzer Chemtech has defined the standard for gas and liquid distribution in packed columns. Distributors are available for a wide range of applications and operating conditions.

**MellapakPlus**
- MellapakPlus represents the novel, high capacity structured packing (typically 25 to 30 % more capacity compared with conventional structured packing)
- MellapakPlus offers significantly lower pressure drop
- MellapakPlus offers a wide range of technical and commercial advantages
- MellapakPlus can be used from low vacuum up to high pressure applications
- Everything one already knows about Mellapak remains valid for MellapakPlus

Laboratory packing
Highest number of theoretical stages per unit height

Standard structured packings are hardly suitable for use in laboratory columns of less than 50 mm diameter. Sulzer laboratory packings are especially designed for this purpose.

Preferred applications:
• Laboratory columns from 20 to 80 mm
• Vacuum from 1 mbar
• Where a high number of theoretical stages is required (DX, EX)
• Distillation of components prone to decomposition
• Preliminary assessment of a separaton task
• Deriving of reliable scale-up rules

Special features:
Small pressure drop
Type EX:
• Highest possible number of theoretical stages, even with very low liquid loadings
• Same pressure drop per theoretical stage as Sulzer BX packing
• Small hold-up
• Capacity nearly double that of wire mesh rings (3 x 3 mm)

Type DX:
This packing has a coarser structure and hence a lower number of theoretical stages.
Suitable for laboratory columns where a modest number of theoretical stages is required, together with low pressure drop and high capacity.
Type DXM/DMY:
These packing types, made of sheet metal, have a lower number of theoretical stages compared to DX. HETP or NTSM remain constant over a wide range of F factors and liquid loads. This makes scale-up significantly easier.
Rombopak
The packing with the unique structure and performance

The unique open structure has been specifically developed for the ambitious distillation requirements of the fine chemical industry. It has been widely used in the most diverse applications and has become a well established preferred choice of the pharmaceutical industry and specialty chemistry.

Special features
• Grid structure: Surface divided in a large number of streamlined lamellas
• Unique distribution effect for the liquid and good distribution of vapor flow
• Maximized open area for the vapor to flow through resulting in a reduced pressure drop
• Constant separation performance independent of vapor load
• Pilot size diameters available down to 28 mm

Preferred applications
• High capacity and separation performance at minimum pressure drop
• Ideal for miniplant applications due to its exceptional scale-up properties. Easy validation in GMP regulated processes
• Highly resistant against fouling due its open structure
• Good performance with viscous liquids

Typical product applications
• Pharmaceutical and fine chemicals
• Alcohols, esters, fatty acids and derivatives
• Flagrances and flavours
• Solvent recovery
• Fouling services
• Pilot plants

Rombopak 12M only for lab or pilot plant up to 150 mm diameter.
Mellapak 250.Y/X
A highly versatile packing type

Mellapak is the most widely used structured packing worldwide. It has proven excellent performance in columns with diameters up to 15 m. It is supplied in sheet metal thicknesses from 0.1 mm up.

Special features
• Pressure drop per theoretical stage 0.3-1.0 mbar
• Pressure drop at 70-80% flooding about 2 mbar/m
• Minimum liquid load approx. 0.2 m³/m²h
• Maximum liquid load up to more than 200 m³/m²h (typically in desorption columns)

Preferred applications
• Vacuum to moderate pressure
• High pressure in selected applications
• Increasing capacity of existing tray and packed columns

Typical applications
• Chemical industry: Ethylbenzene/styrene, tall oil, cyclohexonone/-ol, air separation
• Petrochemical industry: Quench columns, C₃- and C₄- splitters, xylene splitters
• Refineries: Vacuum and atmospheric columns
• Absorption: Natural gas drying, CO₂- and H₂S-absorbers and strippers, ethyleneoxide absorbers and strippers, acrylonitrile absorbers

Mellapak
A solution available for any application
MellapakPlus is a capacity enhanced structured packing. It combines all advantages of the metal sheet packing Mellapak with new geometrical features.

**Features of MellapakPlus**

At the lower and upper end of each packing element, the orientation of the corrugation gradually approaches the vertical axis. Advantages of this geometrical modification:

- The vapor flow smoothly changes direction at the interface between two packing elements
- At the interface vapor flow is nearly parallel to the vertical axis of the column. The gas velocity is therefore reduced by about 25% compared to the velocity inside the packing element
- Both factors reduce the pressure drop and the shear forces, which are especially critical at the interface due to the presence of thicker and less stable liquid films. As a result, premature flooding at the interface is no longer of concern.

In the interior part of the packing element the geometrical features of MellapakPlus and Mellapak are identical. Hence, separation efficiency is similar – but with a significant increase in capacity and a reduction in pressure drop. All other MellapakPlus properties – including installation procedure, mechanical strength and corrosion resistance – are identical to Mellapak.

MellapakPlus performance has been confirmed in category 1 tests at F.R.I.

**Internals**

The close resemblance between MellapakPlus and Mellapak guarantees continued use of the whole range of well known and reliable internals. Internals are now able to handle the increased gas load typical for the high capacity of MellapakPlus. Sulzer Chemtech is committed to the on-going, focused development of novel designs.
MellapakPlus
A new generation of structured packings
This packing has been successfully employed in the industry for over 40 years. Largest diameter supplied to date: 6 m.

**Special features**
- High number of theoretical stages per unit height
- Pressure drop per theoretical stage 0.1 – 0.5 mbar
- Most economical load range:
  - F factor 1-2.5 \( \sqrt{\text{Pa}} \)
- Minimum liquid load approx. 0.05 m\(^3\)/m\(^2\)h
- Small hold-up

**Preferred applications**
- Large number of theoretical stages
- Vacuum from 1 mbar to atmospheric pressure
- Where minimum pressure drop per theoretical stage is important
- Small overall height
- Batch and continuous columns
- Pilot columns (reliable scale-up)

Limited suitability for
- Fouling substances
- Non-wetting liquids

**Product applications**
- Monomers from plastics (MDI, DMT, etc.)
- Fatty acids, fatty alcohols, fatty acid esters
- Mono-, di-, tri-, and tetraethylene glycols
- Fine chemicals

**BXPlus**
BXPlus is a further development of the well proven gauze packing BX. Its geometry is similar to MellapakPlus. BXPlus offers the same efficiency as BX with a 20% lower pressure drop. It is recommended for gentle distillation at higher capacity.
This packing was developed for separations that require a large number of theoretical stages. Largest diameter supplied to date: 1.8m.

**Special features**
- Maximum number of theoretical stages per meter
- Most economical load range:
  - F factor 1.5 - 2√Pa
- Minimum liquid load approx. 0.05 m³/m²h
- Small hold-up

**Preferred applications**
- For a very large number of theoretical stages
- Vacuum from 1 mbar to atmospheric pressure
- Small overall height
- Batch and continuous columns
- Pilot and laboratory columns (reliable scale up)

Limited suitability for
- Fouling substances
- Non-wetting liquids

**Product applications**
- Pharmaceutical products (vitamins, etc.)
- Fragrances (menthol, geraniol, etc.)
- Separation of isomers
The MELLAPAK 125.X, 125.Y, 250.X and 250.Y and MellapakPlus 252.Y are also available in different kinds of thermoplastics. Packings made of polypropylene (PP), postchlorated polyvinylchloride (PVC-C), polyvinylidene-difluoride (PVDF), Teflon® PFA and polyether ether ketone (PEEK) can be supplied.

The plastic versions of MELLAPAK have proven operational record in various types of absorption and desorption columns.

**Special features**
- Large number of transfer units per meter, low HTU, depending on the system
- Small pressure drop per meter packed height
- Most economical load range up to F factor $4 \sqrt{\text{Pa}}$
- Maximum operating temperatures: approx. 110°C for polypropylene
  approx. 150°C for PVDF

**Product applications**
- HCl absorbers
- SO₂ absorbers
- Flue gas cleaning columns
- Sea water deairators

MellapakPlus 252.Y has the same efficiency as Mellapak 250.Y and same capacity as Mellapak 250.X
Gauze packings
Sulzer plastic gauze packing, type BX

The plastic gauze packing has been used industrially with great success for many years. The special gauze structure provides a very good wettability, even in aqueous systems. This packing is used primarily for columns with low liquid loads.

Special features
• Large number of transfer units per meter, low HTU, depending on the system
• Minimum pressure drop, typically 2–4 mbar/m
• Minimum liquid load approx. 0.05 m³/m² h
• Self-wetting packing surface, even for aqueous solutions
• Operating temperatures up to 80 °C, depending on the chemical components

Preferred applications
• Small liquid loads
• Increasing performance of existing columns
• Columns with small overall height

Product applications
• Methanol absorbers
• Isopropanol absorbers
• Dimethylformamide absorbers
• Formaldehyde absorbers

Plastic gauze packing BX
atmospheric pressure, ID = 300 mm
Mellacarbon – pure carbon

Carbon does not react with most solvents, acids or lyes. Sulzer Chemtech offers various Mellacarbon types.

- Corrosion-proof against caustic solutions, non-oxidizing inorganic acids including hydrofluoric acid and carboxylic acids
- Excellent wettability, also in aqueous systems
- Specific surface area of 125 – 1700 m²/m³
- High thermal stability (> 400 °C)

Product applications
- HCl separation for production and for HCl recovery (typically in the production of polycarbonate)
- MCA/DCA distillation
- Production of phosphoric acid
- Concentration of hydrofluoric acid
- Separation of chlorophenols
With Mellagrid, Sulzer Chemtech combines the efficiency of structured packings with the mechanical resistance of a grid. Mellagrid is used wherever the mechanical strength of structured packings is a concern or where coking is likely to occur.

Special features

- Not sensitive to coking and fouling due to its smooth surface and geometrical structure
- Efficient dissipation of temperature
- Better de-entrainment and separation efficiency than a traditional grid
- The low element height and its structure allow for easy cleaning. It can be removed, unscrewed and cleaned with a water jet
- Mechanically robust structure

Applications

- Atmospheric or vacuum tower:
  - Wash section
- FCC Main Fractionator:
  - Slurry pumparound section
- Coker or
  - Visbreaker Fractionator:
  - Wash section

various liquid loads, air/water, T=30 °C, atmospheric pressure
Katapak-SP
Sulzer reactive distillation packing

This packing was developed to be applied in reactive distillation processes. With the modular concept separation efficiency and catalyst volume fraction can be varied to perfectly fit the requirements of each specific process. Other types are available on request. Largest diameter supplied to date: 2 m.

Special features:
• Flexible design combining catalyst elements and MellapakPlus layers
• High separation efficiency
• High reaction capacity

Product applications:
• Synthesis of acetates (e.g. butyl acetate)
• Hydrolysis of methyl acetate
• Synthesis of fatty acid esters
• Synthesis of acetals
• MTBE, ETBE, TAME

**Collector-distributor systems/Vapor distributor**

<table>
<thead>
<tr>
<th>Type</th>
<th>Column diameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>VSI</td>
<td>from 0.25 m</td>
<td>The collector/distributor VS is used whenever collection and redistribution of liquid is required at very high liquid loads. It resembles a chimney tray; however the chimney arrangement is custom designed for your application’s liquid distribution and pressure drop requirements. For moderate liquid loads applications, where liquid mixing is important, a separate accumulator tray must collect the liquid and feed it to a liquid distributor located below it.</td>
</tr>
</tbody>
</table>

In addition, special collector-distribution systems are available, e.g. for use at increased pressures or - in conjunction with highly corrosion-resistant packings - in processes with aggressive media. Supplementary information is to be found in our brochure “Internals for Packed Columns”.

**Support grids**

<table>
<thead>
<tr>
<th>Type</th>
<th>Dimension</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TEB/TSB</td>
<td>0.5 to 10 m</td>
<td>TEB and TSB are used with structured packings. Both require support rings to be welded to the column wall. TEB is supports for flanged columns. The segmental grids of the TSB pass through manholes and are clamped together for convenient installation. No welding is required. TEB and TSB support grids are ideal for applications requiring expensive high-alloys. Certain high performance packings require additional drip plates.</td>
</tr>
<tr>
<td>TS/TE</td>
<td>from 0.1 m</td>
<td>TE and TS are intended for structured packings with surface area over 350 m²/m³ packing volume. They are designed with drip plates to prevent premature flooding of the packing. These support grids rest on support rings or gussets welded to the column shell. For columns over 3 m, additional supports and major beams may be required.</td>
</tr>
</tbody>
</table>
Revamping of existing columns

Repacking the entire column cross-section
Along with other aspects, this modification serves to increase the throughput.

Repacking with column sleeve
To improve product purity without increasing capacity. Due to the good hydraulic performance of the Sulzer structured packings, the entire column cross-section is often not needed. The Sulzer packing is fitted inside a sleeve of smaller diameter.

Installation
The new column internals are installed through the manholes: support beam, support grid, packing, locating grid, distributor and collector.

Existing column
Items supplied by Sulzer Chemtech
Installation either by the customer with Sulzer advising or complete installation service by Sulzer as the customer wishes.

1 Sulzer packing
2 Support grid
3 Support beam
4 Collector
5 Support lugs (welded-in)
6 Ring channel
7 Liquid distributor
8 Locating grid (hold-down grid)
9 Existing trays (incl. support rings)

Repacking work
(Example for tray towers)
• Remove the trays
• Remove tray support rings (when required - depending upon the installation method of the packing)
• Weld in the support lugs, tie-bars and ring channels for the liquid collectors
• Provide manholes and sight glasses at the level of each liquid distributor
• Fit new feed and instrument connections, if necessary
• Clean the column

Repacking time
Depending on the column size and personnel deployed, modifications to the existing column may take one to four weeks, and several days to two weeks for fitting the new parts.
Installation

Installation of packing

The packing is fitted inside the column sleeves at the preassembly site

Revamping of a vacuum column with Mellapak

Inspecting packings after installation

The column sleeve is lowered into the column with two cranes. Weight: 100 tons

Installation of the liquid distributor
Sulzer columns – your solution

Sulzer columns of sectional design
All internals can be installed through the column flange openings

Welded column, monoblock type
All internals in segments for installation and removal through manhole, nominal diameter 500 up to 1000 mm

Variations on the above design
Feed:
  • vapor
  • two phases with flash box
Side stream:
  • liquid from collector
  • vapor collector

Comprehensive customer service

**Distributor test facility**
Uniform liquid distribution is decisive in securing good separation performance from a rectification/absorption column incorporating structured packings especially for columns of large diameter. This requirement was recognized early on in the development of the Sulzer structured packings. Hence the geometrical configuration of the packings promotes liquid stream intersections and thus intermixing. Moreover, a whole series of liquid distributors has been developed, which are optimally matched for column diameter, packing type and operating conditions.

The distributor test facility has provided results which have contributed significantly to the construction of large distributors with diameters ranging from 3 m up to 15 m. As part of integrated quality control, all distributor types are fully tested before delivery to customers. Sulzer Chemtech is certified in accordance to ISO 9001:2000 and ISO 14001.

**Laboratories**
Sulzer Chemtech has set up a process engineering laboratory in Winterthur, Switzerland for development and testing of structured packings, column internals and trays. At Sulzer Chemtech Allschwil Ltd, a laboratory carries out customer trials and pilot tests. Also an analytical laboratory and trained personnel are available.

Formula notation

- \( c_G \): Load factor = \( \frac{w_G \sqrt{\rho_G}}{(\rho_L - \rho_G)} \) m/s, 3.281 ft/s
- \( F \): F factor = \( w_G \cdot \sqrt{\rho_G} \) m/s \( \sqrt{\text{kg/m}^3} \) = \( \sqrt{\text{Pa}} \) mbar m/s \( \sqrt{\text{Pa}} \), 0.8197 ft/s \( \sqrt{\text{lbm/ft}^3} \)
- \( w_G \): Superficial gas velocity (related to empty column) m/s, 3.281 ft/s
- \( \rho_G \): Gas density kg/m³, 0.06243 lb/ft³
- \( \rho_L \): Liquid density kg/m³, 0.06243 lb/ft³
- \( M \): Molar mass kg/kmol, 1.000 lb/lb-mol
- \( p \): Operating pressure mbar, 0.7501 mm Hg, 14.50 psia
- \( \Delta p/\Delta z \): Pressure drop per unit height mbar/m, 0.1224 in H₂O/ft
- \( T \): Operating temperature K, 1.800 R
- \( A_c \): Column cross-section m², 10.76 ft²
- \( d_c \): Column diameter m, 3.281 ft
- \( \psi \): Flow parameter = \( L/G \cdot \sqrt{\frac{\rho_G}{\rho_L}} \) (-)
The activity program comprises:

- Process components such as fractionation trays, structured and random packings, liquid and gas distributors, gas-liquid separators, and internals for separation columns
- Engineering services for separation and reaction technology such as conceptual process design, feasibilities studies, plant optimizations including process validation in the test center
- Recovery of virtually any solvents used by the pharmaceutical and chemical industry, or difficult separations requiring the combination of special techniques, such as thin film/short-path evaporation, distillation under high vacuum, liquid-liquid extraction, membrane technology or crystallization.
- Complete separation process plants, in particular modular plants (skids)
- Tower field services performing tray and packing installation, tower and column maintenance, vessel welding, and plant turnaround projects
- Mixing and reaction technology with static mixers
- Cartridge-based metering, mixing and dispensing systems, and disposable mixers for reactive multi-component material

Sulzer Chemtech Ltd, a member of the Sulzer Corporation, with headquarters in Winterthur, Switzerland, is active in the field of process engineering and employs some 2500 persons worldwide. Sulzer Chemtech is represented in all important industrial countries and sets standards in the field of mass transfer and static mixing with its advanced and economical solutions.
